In simple terms, environmental water is a share of water which is specifically and purposefully managed by humans to benefit the environment by either reserving water or releasing volumes into rivers, creeks and wetlands. The Lachlan Riverine Working Group (LRWG) acts in an advisory capacity to manage environmental water in the Lachlan, assisting with the implementation of the Lachlan Environmental Watering Management Plan (LEWMP) and Lachlan Annual Environmental Water Plan.

[symple_heading type="h3" title="Lachlan Riverine Environmental Water Management Plan" margin_top="20px;" margin_bottom="20px" text_align="left" class="water-management"]

The LEWMP assists in the delivery of environmental water through setting priorities based on important ecological, cultural and social values. The wetlands selected as priority for delivery of environmental water include those recognised as nationally and regionally important, providing good examples of wetland types associated with lowland rivers. In managing significant wetlands, consideration is given to how environmental water can also benefit key riverine assets, functions and values.
